

See your fleet the way insurers do.

Inspections pile up. Violations stack against your record. Compliance data hides in federal systems. Without clear visibility into your safety profile, carriers face higher premiums, stalled growth, and risks that go unchecked.

The Fusable Motor Carrier Solution

Fusable puts the power back in your hands. From inspection to compliance, safer fleets start with smarter data. From risk to readiness, motor carriers drive smarter with Fusable.

Rich Reliable Data

Cleaned data from USDOT, FMCSA, State & Federal Inspection Data

The Proven Tool for Motor Carriers

The Result

Trusted data that empowers safer decisions and gives you a clear view of your fleet.

Ways Fusable Can Help

Improves transparency

Carriers can see their profile from the insurer's point of view.

Proactive risk mitigation

Alerts and tools give you insights to take corrective action before issues worsen.

Potential cost savings

Carriers who manage their safety better are more likely to receive less violations and avoid premium hikes.

Better decision-making

For operations, safety, and driver performance.

Fusable solves the problems motor carriers face

Hidden Violations Inflate Insurance Costs

Unseen inspection data and violation trends can push premiums higher without carriers understanding why. CAB gives you the same safety insights insurers use, giving fleets the visibility to correct issues and lower costs.

Compliance Gaps Invite Costly Penalties

Missed updates in FMCSA or state records can trigger audits, fines, and out-of-service orders. CAB monitors compliance data in real time and alerts carriers before small problems become expensive setbacks.

Crash and Inspection Data Stays Buried

Critical safety events often hide in public databases, leaving carriers blind to their true risk profile. CAB consolidates this information into a clear dashboard so managers can coach drivers and strengthen safety scores.

Unclear Safety Scores Stall Growth

Without knowing how changes in violations or inspections impact BASIC scores, carriers struggle to improve their standing. CAB's BASICs Calculator™ models different scenarios, helping fleets take proactive steps to raise their scores.

Reactive Risk Management Hurts Reputation

Carriers often learn about risk exposure only after insurers or regulators take action. CAB delivers proactive alerts and reporting so fleets can stay ahead of issues, protect their reputation, and win more business.
