

What Happens When Your Data Provider Falls Behind?

Industry disruption creates uncertainty. Data gaps create risk. When transportation data changes, teams still need to assess carriers, monitor changes, evaluate risk, and make confident business decisions.

Transportation data disruption can put risk decisions under pressure.

Your team depends on timely transportation intelligence to keep work moving, but when industry data shifts, not every provider can keep pace. The result is reduced visibility, delayed decisions, and less confidence when teams need clarity most.

Now the questions become:

- Is your provider responding quickly?
- Can your team still monitor carrier changes?
- Are key risk signals still visible?
- Can you keep making decisions with confidence?
- Does your provider have a plan when visibility gets harder?

For brokerages, insurers, underwriters, risk professionals, and carrier selection teams, data gaps can become business risk fast.

Your provider's response matters when the data environment changes.

The Solution

CAB helps protect visibility when conditions change.

During a recent industry-wide data disruption, CAB moved quickly to support customers who rely on trusted transportation intelligence every day.

CAB focused on helping customers keep risk decisions moving through:

- Visibility into the data customers depend on
- Support for risk assessment and carrier monitoring
- Stronger internal processes for data continuity
- Transportation intelligence for changing conditions

CAB gives transportation professionals a partner built to help navigate change, reduce uncertainty, and support confident decision-making when conditions shift.

When visibility gets harder, your provider should not disappear. Make sure your transportation intelligence partner is built for confidence through change.
